Registration, Evaluation Authorization and Restrictions of Chemicals (also known as; and will be referred to moving forward, REACH) regulations concerning the use of chemical substances

Dear Customer,

In regard to the European regulation known as REACH, J.W. Winco, Inc. would like to state that we neither manufacture nor import chemical substances. We are a downstream industrial user of chemical substances related to some of the products that we sell, and as our company is established outside the EU we are not bound by the restrictions of the REACH requirements.

To the best of our knowledge, we do not use any of the chemical substances contained on the REACH list; this includes:

- Substances of Very High Concern (SVHC) above the identified tolerances stated in; and including all amendments to, Article 57 and Annex XIV
- Substances that are defined as Restricted in; and all amendments to, Article 67 and Annex XVII

We are continually monitoring this, and should we discover that any product does contain any of these materials, we will take swift and appropriate action to correct and rectify the situation.

Regards,

*Matt Lunow*
