

ONE PARTNER, COMPLETE SUPPORT

Seratech Engineering and Prototyping, based in the Netherlands, specialises in customised mechanical engineering. By integrating design and construction, they manage nearly all projects in-house. Their focus on innovation and precision demands high-quality components to ensure efficient, reliable production. To maintain these standards, Seratech sought a dependable partner. Essentra Components delivered the breadth of supply, speed, and consistency needed to support their growth and uphold the performance of their advanced machinery.

THE CHALLENGE

Seratech develops and assembles machines that rely on a wide variety of specialised, high-quality components. Managing this complexity across multiple suppliers made it harder to maintain efficiency. They needed a reliable partner who could simplify the process, deliver consistent quality, and support both current and future needs.

THE SOLUTION

With an existing local relationship, Seratech approached Essentra Components, a global manufacturer and distributor with more than 65 years of experience. This collaboration gave Seratech instant access to over 45,000 components, all available directly from stock—including essential items like caps and plugs, cable ducting, cable clips, and rocker switches.

After a series of conversations to get a clear picture of what was needed, Essentra provided free samples to help Seratech test and refine their assembly process. Free CAD drawings made design integration straightforward, while the simple, flexible ordering system kept things moving without unnecessary admin.

The result was a tailored, responsive partnership that addressed every challenge with efficiency and precision.

Caps and plugs, cable ducting, cable clips, & rocker switches

"Having a trusted partner like Essentra means we no longer worry about component supply"

— RAMSES SELEN, OWNER, Seratech

RESULTS

Working with Essentra Components gave Seratech a dependable partnership they could build on. Having a single supplier made day-to-day operations smoother and helped avoid unnecessary delays.

Efficiency: Relying on one source for components cut down on downtime and made the production process more reliable.

Confidence: With practical support—like free samples and a straightforward ordering process—Seratech felt supported from the start and throughout the build.

Warranty: The components delivered met all technical requirements, improving consistency and reinforcing the overall quality of each machine.

Innovation: With a dependable partner managing component supply, Seratech is free to focus on what they do best: pushing the boundaries of technology and engineering.

ONGOING SUPPORT

Essentra Components continues to work hand-in-hand with Seratech, delivering customised solutions and long-term support. This trusted relationship ensures that Seratech's evolving needs are always met, today, and in the future.
